Summary

BCA (Hons.) graduate and full-stack developer with hands-on experience building Python, Django, and React web applications. Delivered three end-to-end projects spanning role-based platforms, machine-learning, APIs, and responsive front ends, plus four months of network-security exposure at Hitachi Systems configuring Fortinet firewall rules and access control lists.

Work Experience

Network Security Intern — Hitachi Systems India Pvt. Ltd. Pune, India Jan 2025 – Apr 2025

- Reviewed 40 of 78 Fortinet firewall rulesets as part of a 6-member security team, mapping each rule to security-policy requirements and flagging 12 redundant or overly permissive entries for remediation.
- Built 15+ Access Control Lists (ACLs) in a simulated network lab, cutting firewall testing time by 10% by standardizing rule templates and reusing documented test cases.
- Logged 25+ rule-review findings and change requests in team trackers, reducing review turnaround by 15% through consistent checklists and escalation notes.

Projects

TMDB Movie Discovery Dashboard Sep 2026

- Built a React.js movie discovery dashboard on the TMDB REST API with keyword search, genre/year filters, sorting, and pagination across 10,000+ titles.
- Developed reusable components and custom hooks for movie cards, detail views, and watchlist state, cutting duplicated UI code by 35% across 5 screens.
- Engineered a fully responsive grid dashboard across mobile, tablet, and desktop viewports using Tailwind CSS

Air Quality Index (AQI) Prediction System Jun 2026 - Aug 2026

- Built a Flask-based machine-learning web app that predicts Air Quality Index from 6 environmental parameters, reaching 85% accuracy on a held-out test set of 1500+ samples.
- Preprocessed and analyzed 10,000+ records with Pandas and Matplotlib, and trained a Scikit-learn regression model that improved baseline prediction accuracy by 12%.
- Implemented manual and API-based prediction endpoints with real-time trend visualizations, sustaining a sub- 500ms median response time.

Learning Management System (LMS) Apr 2026 – Jun 2026

- Built a role-based Learning Management System in Django supporting 200+ administrators, lecturers, and students across 3 permission tiers, automating enrollment and grading workflows to cut administrative effort by 30%.
- Delivered 8 role-scoped Django modules — course/semester management, student records, academic sessions, and news/events — cutting average admin task time by 25% by consolidating duplicated CRUD logic into reusable class-based views.
- Designed normalized MySQL/SQLite schemas and full CRUD operations for 30+ academic entities, improving average data-retrieval time through indexed foreign keys.

Technical Skills

Languages: Python, JavaScript, SQL, HTML5, CSS3
Frameworks & Libraries: Django, Flask, React.js, Tailwind CSS, Pandas, NumPy, Scikit-learn
Databases: MySQL, SQLite
APIs & Architecture: REST APIs, MVC
Tools & Platforms: Git, GitHub, VS Code
Networking & Security: TCP/IP, DNS, HTTP/HTTPS, VLANs, ACLs, Fortinet,

Education

Symbiosis International University 2022 – 2026
Bachelor of Computer Applications (Hons.) Pune, India

- Honors: Artificial Intelligence and Machine Learning
- Coursework: Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks, Web Technologies, Mobile Development

La Martiniere College - Class 12th (ISC), Lucknow 2022

Certifications

Cloud Computing - IBM SkillsBuild | Cybersecurity - IBM SkillsBuild | Issued 2026
